Mulual Lunds Prove Point; **Outperform Market as Whole**

EXPERTS. fund managers profit from experience. That's what expert means

It didn't take long for sales executives to discover that investors want big percentage gains. Portfolio managers tailored their product accordingly—and product product accordingly—and successfully. In recent years, go-go funds—accent on action and growth—have outperformed the stock mar-

outperformed the stock market as a whole.

This was not always so. At Senate Banking & Currency Committee hearings last year, Sen. Thomas J. McIntyre (Dem. N.H.) contended he could do better than mutual fund experts by the county darks at a newsparency of the stock throwing darts at a newspa-per stock table. His evidence was not exactly scientific.

But I can corroborate it.
In the three-year intervals
1960-62, 1961-63 and 1962-64,
the Standard & Poor's 500
stock average (adjusted) out performed Growth funds as

performed Growth Tanks as a group.

Tenyear results also supported the dart theory. For 1953-62 and 1954-63 Growth funds and Standard & Poor's ran neck and neck in performance. In 1965-64
S&P clearly did better. Then the experts began to catch on and up.

DECISIVE THE THE DECISIVE turn came three years ago. In the three-year intervals 1963-65, 1964-66 and 1965-67, the Growth funds as a group outdistanced the S&P 500 (see short). And in the land (see chart). And in the ten year intervals ending in 1965, 1966 and 1967 the Growth group also did bet-

Go-go funds ferreted out new industries and compa-nies. They took greater risks by increasing commitments to volatile and sometimes unseasoned stocks. Put-'emaway-and-watch'-em patience

was subordinated to short-

was subordinated to short-term profits.

This worries the Securl ties & Exchange Commis-sion. Have mutual fund managers become in-and-outers—traders? Their buy-ing of the same glamor stocks has a bootstraplifting effect.

Besides, most go-go funds are "young." They haven't— through long-term sales ef-fort and market appreciation—become investment giants. A few highflying stocks would boost the percentage gain of a fund with assets of \$10 million, but would be swallowed like a boulder in the ocean in a billion dollar portfolio. However, unsuccessful selections will impoverish a small portfolio even as bom-boomt tion-become investment folio even as boom-booms stocks enrich it.

Not one billion-dollar fund was among the top 15 Growth funds last year. Growth funds last year. Eleven were under \$100 mil-lion in acceptance. lion in assets. The largest, Keystone S-4, had assets of \$477 million. As it prog-ressed in size, it dropped in rank from fifth to 26th and then climbed back to 15th. This is shown in the fund-by-fund table (available on request).

ONCE, DREYFUS Fund was a star performer. It still ranks 11th for the ten-years ended December 31, 1967. Bu as its assets climbed from \$15 million to \$2.3 biltion, it dropped in rank to 36 for five years, 46 for three years, and 63 for one year. Putnam Growth Fund dropped from seventh in ten-year performance to 31st as assets rose from \$1 mil-lion to more than half a bil-

In the Growth with Income group, only three of the top ten for the period from 1958-67 were among the top ten last year. One of these, Investment Co. of America increased in size, from \$90 million to more than \$800 million. And its rank fell from first, second, or third to ninth.

Only one superior Bal-anced Fund had assets in excess of \$300 million. Among cess of \$300 million. Among the lower-ranking funds (bottom third) were two of more than a billion. In the top third among Income funds, only one had assets of \$100 million. This "sizes up" the times as well as performance. Gogo funds "sell." People, these days, shy away from staid funds devoted to income.

CAVEATS ARE neces-

sary.
One: Investors would be foolish to choose a fund merely because it's small. funds are small because performance has been poor.

Two: Past performance is a guide but not prologue. Excellence can be self-de-Excellence can be seit-de-feating. As investors rush after percentage gains, suc-cessful funds can get size-bound. Enterprise Fund is an exception. It has grown from \$3 million to \$250 mil-lion yet has ranked No. 1 in performance. consistently performance consistently. Rowe Price stopped selling shares in its New Horizons Fund when assets climbed above \$100 million. It, too, has had a good record.
Three: Managers of funds

Docs not mean should nit seek a good small fund tather than 2 4009 Large Ford.

Enterpise

BEATING THE MARKET Growth-oriented mutual funds outperfo rmed Standard & Growth-oriented mutual ranas outperformed occurrences Poor's 500 stocks in 1965, 1966, and 1967, but not earlier. GROWTH FUNDS 1960-62 1961-63 1962-64 1903-0-res: Standard & Poor's Corp. "Investment Companies".

which charge a same mission (load funds) possess no monopoly on results, As they perform no a group, they perform no better and no worse than no load (no-commission) tunds. This year's fund-byfunds. This year's fund-by-fund study reconfirms pre vious studies on this.

As a corollary, the sales

charge—customarily 2.3% on the purchase price— handleaps the investor. But individual load funds do sur-pass the no loads—both in

terms of How Management Performed and How Inves-tors Fared. This is to be ex-pected. Load funds outnumber no-loads seven to one.

Fund-by-fund results, showing How Managements Performed and How Investors Fared, are available on request. Send large self-addressed stamped envelope to J A. Livingston, c/o Phila-delphia Bulletin, Philadelphia, Pennsylvania, 19101.
